# Meggline
TP150

Simplicity is the most difficult to achieve. Which makes it the best challenge for us.

Do you want to process your eggs in a way that is smarter and as simple as possible at the same time? As super specialists in the international egg industry, we use our knowledge and experience to make it as efficient and easy as possible for you.

We believe in properly thought out simplicity.

Based on this philosophy, we develop products that allow you to achieve maximum results with minimum effort, using minimum space.

About Meggline TP150

Properties Meggline TP150

Meggline
TP150

Palletising to the max

The Meggline TP150 is able to combine compactness with maximum deployment. Because this palletiser features several loading places, and makes it possible to palletise 2 types of pallets at the same time. This means you can separate different barns and types, with each type having its own pallet location.

Advantages of multiple loading places

The Meggline TP150 features an impressive 4 loading places. As a result, the Meggline is ideal for installation between the Meggbot and the Mr robot. Therefore, an even high level of speed and efficiency can be realised.

Maximum deployment

Due to its multiple loading places, the Meggline TP150 has enough space to store empty dividers as well as empty pallets. Pallet locations 3 and 4 offer space for 60 dividers and 12 pallets. The machine can automatically unstack them during the palletising process.

Compact alternative

This Meggline also features 4 pallet places, and the whole set-up only needs a surface area of just under 11 m2. And considering its competitive price, the Meggline is the ideal solution between the Meggbot and the Mr robot.
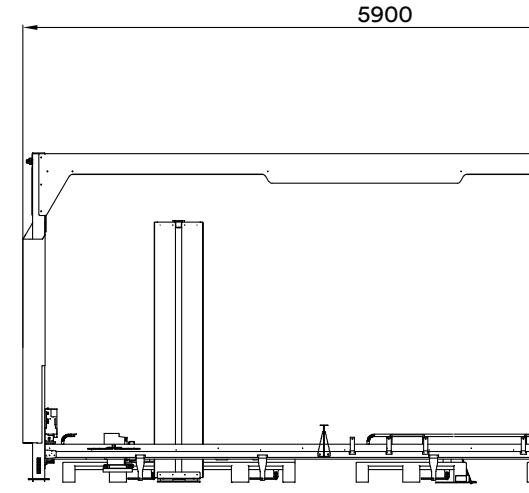

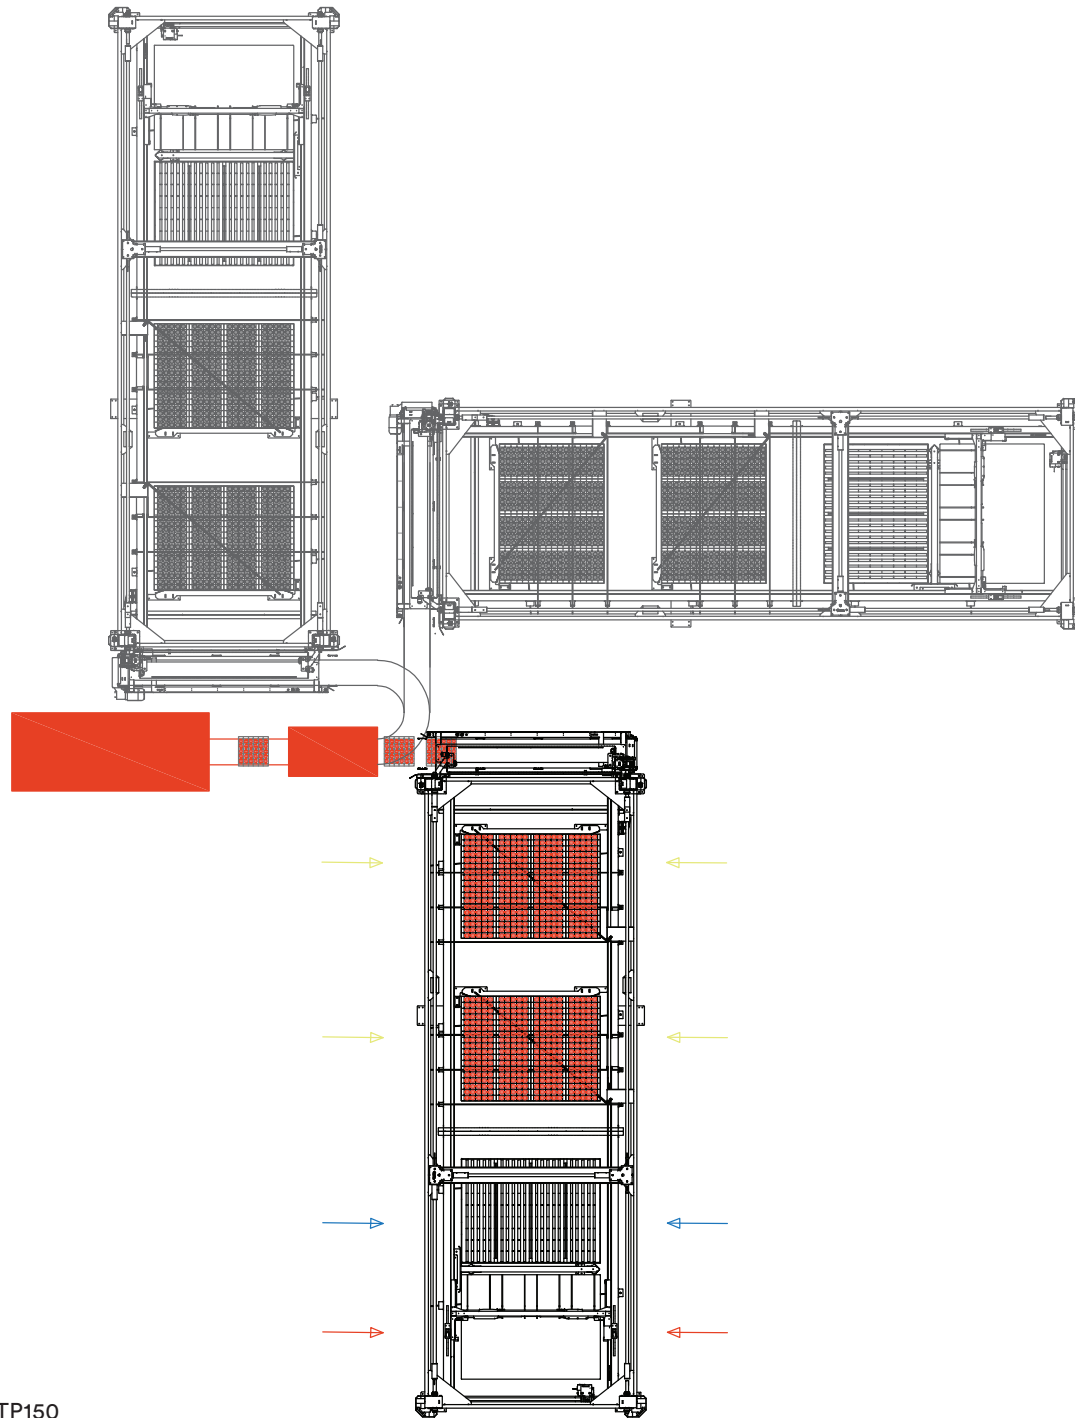

'The most compact and affordable palletiser'
